

a.) Amendments to the Specification

Please amend the paragraph at page 17, lines 11-18 to read as follows.

Examples of the complex carbohydrate precursor used in the formation of the complex carbohydrate include monosaccharides, oligosaccharides, proteins, peptides, glycoproteins, glycolipids and glycopeptides. Specific examples include but are not limited to N-acetylglucosamine, GlcNAc $\beta$ 1-3Ga1 $\beta$ 1-4Glc, ~~and the like~~. The complex carbohydrate precursor can be used at a concentration of from 0.1 to 100 nM, preferably from 0.5 to 50 mM.
